blakus slīkst hidroelektrostacijas (HES) kanāla ūdeņos. Kādēļ tā?

Upe aizsprostota un izsīkst! Tik sausu Lielo Juglu neatceramies redzējuši pat

Ropažu dambis un slūžu sistēma ļauj kontrolēt, cik daudz ūdens tiek novirzīts HES kanālā un cik paļiek

vissausākajā vasarā! Šādus signālus šopavasar Latvijas Televīzija saņēmusi no vairākiem Ropažu novada iedzīvotājiem. Tikmēr citu ropažnieku īpašumi turpat
